

Integration

How to integrate UCDN with B2Evolution?

(*Disclaimer: Please be advised that the following instructions may have undergone some changes due to the third-party software and plugins updates.)

b2evolution.net

You only need to edit a single file in order to set the path variables to point to the CDN location:

Open `blogs/conf/_advanced.php` Add the following code on top of the page:

```
$cdnurl = 'http://ucdn.your-domain.net/';
```

So that first line of code looks like this:

```
<?php $cdnurl = 'http://ucdn.your-domain.net/';
```

Find the following line:

```
$rsc_url = $baseurl.$rsc_subdir;
```

Replace it with:

```
$rsc_url = $cdnurl.$rsc_subdir;
```

Find the following line:

```
$skins_url = $baseurl.$skins_subdir;
```

Replace it with:

```
$skins_url = $cdnurl.$skins_subdir;
```

Integration

Find the following line:

```
$media_url = $baseurl.$media_subdir;
```

Replace it with:

```
$media_url = $cdnurl.$media_subdir;
```

Note:

"ucdn.your-domain.net" needs to be replaced with the proper CDN temp URL or, if you have a custom URL, the proper custom URL. You can check if your application is using the CDN by reloading it in your browser and viewing the source code of the page.
