

Integration

How to integrate UCDN with Drupal?

(*Disclaimer: Please be advised that the following instructions may have undergone some changes due to the third-party software and plugins updates.)

www.drupal.org

The CDN module add-on for Drupal will alter URLs, so your static content will load from the CDN servers, as opposed to your origin server. The module provide only "Origin Pull", which is basically used as a domain name rewriting mode.

- Login to your Drupal admin panel, click Manage ⇒ Extend ⇒ Install New Module".
- In the "Install from a URL" box, enter the CDN Module URL: <http://ftp.drupal.org/files/projects/cdn-8.x-3.0.tar.gz>(check the official [Drupal CDN Project Page](#) for the newest stable version) and click "Install".
- Now click on Manage ⇒ Configuration ⇒ Web Services ⇒ CDN integration. In CDN settings tab tick the "Serve files from CDN" status box, then click "Save Configuration."
- Click on "Details", then select "Origin Pull". For the "CDN Mapping" box, enter the CDN URL, for example:<http://10001-5.b.cdn13.com>
- Click "Save Configuration"

▼ STATUS

Serve files from CDN
Better performance thanks to better caching of files by the visitor. When a file changes a different URL is used, to ensure instantaneous updates for your visitors.

▼ MAPPING

Use mapping

Serve with the extension from

Not configurable through the UI. Modify `cdn.settings.yml` directly, and [import it](#). It is safe to edit all other settings via the UI.

▼ FOREVER CACHEABLE FILES

Make files cacheable forever
Better performance thanks to better caching of files by the visitor. When a file changes a different URL is used, to ensure instantaneous updates for your visitors.

[Save configuration](#)

Your website now should be using CDN services and you can confirm this by reloading your website and viewing the page source. If your Origin URL is rewritten to the CDN temporary URL you are all set.
