

Integration

How to integrate UCDN with Magento?

(*Disclaimer: Please be advised that the following instructions may have undergone some changes due to the third-party software and plugins updates.)

magento.com

Magento has the ability to utilize CDN Functionality without the need for a 3rd party plugin.

Setting up a CDN using Magento's native support (version 2.3.2):

1. Log into the admin panel of your website.
2. Go to Stores ⇒ Configuration.
3. Under General select Web option.
4. Go to URL's settings tab.

Web

Base URLs

Any of the fields allow fully qualified URLs that end with "/" (slash) e.g. http://example.com/magento/

Base URL (store view)
Specify URL or {{base_url}} placeholder.

Base Link URL (store view) Use system value
May start with {{unsecure_base_url}} placeholder.

Base URL for Static View Files (store view)
May be empty or start with {{unsecure_base_url}} placeholder.

Base URL for User Media Files (store view)
May be empty or start with {{unsecure_base_url}} placeholder.

Follow these setup instructions:

- Set the Base URL of your website so that your website domain is in the following format: **http://ucdntest.cf/**
- Base link URL leave as default: **http://ucdntest.cf/**
- Leave the Base URL for Static View Files empty
- Base URL for Media Files: **http://10001-1.b.cdn13.com/pub/media/**

Do not forget to replace the zone of UCDN 10001-1.b.cdn13.com with your actual CDN URL and http://ucdntest.cf/ with your domain!

Now that you are officially using a CDN on your website, you can check if your URLs are being rewritten by loading your website and viewing the source code of your page.
