

# Integration

## How to integrate UCDN with vBulletin?

(\*Disclaimer: Please be advised that the following instructions may have undergone some changes due to the third-party software and plugins updates.)

[vbulletin.com](http://vbulletin.com)

Integration with VBulletin 5.3.2

1. Login to your VBulletin administration and navigate to Admin CP.
2. Go to "Styles & Templates" ⇒ "Replacement Variable Manager".
3. Then choose "Add New Replacement Variable" next to the style you are using.
4. Create a new replacement variable for each item.

In case you have more directories with your images, repeat the process for all of them. You might create custom CDN resource for each of these directories or use single one with different paths. Here is a list of common variables you might need:

SEARCH FOR TEXT	REPLACE WITH
<code>href="filedata/</code>	<code>href="http://[redacted]-20.s.cdn13.com/filedata/</code>
<code>href="clientscript/</code>	<code>href="http://[redacted]-20.s.cdn13.com/clientscript/</code>
<code>src="/core/images/</code>	<code>src="http://[redacted]-20.s.cdn13.com/core/images/</code>
<code>src="filedata/</code>	<code>src="http://[redacted]-20.s.cdn13.com/filedata/</code>
<code>src="images/</code>	<code>src="http://[redacted]-20.s.cdn13.com/images/</code>
<code>src="customavatars/</code>	<code>src="http://[redacted]-20.s.cdn13.com/customavatars/</code>
<code>src="customprofilepics/</code>	<code>src="http://[redacted]-20.s.cdn13.com/customprofilepics/</code>
<code>url("clientscript</code>	<code>url("http://[redacted]-20.s.cdn13.com</code>
<code>src="clientscript/</code>	<code>src="http://[redacted]-20.s.cdn13.com/</code>
<code>src="{vb:raw vboptions.bburl}/clientscript/</code>	<code>src="http://[redacted]-20.s.cdn13.com/</code>
<code>url(/images/</code>	<code>url("http://[redacted]-20.s.cdn13.com/images/</code>
<code>url(images/</code>	<code>url(http://[redacted]-20.s.cdn13.com/images/</code>
<code>var IMGDIR_MISC="images/misc";</code>	<code>var IMGDIR_MISC="http://[redacted]-20.s.cdn13.com/images/misc";</code>
<code>var IMGDIR_BUTTON="images/buttons";</code>	<code>var IMGDIR_BUTTON="http://[redacted]-20.s.cdn13.com/images/buttons";</code>

You just setup vBulletin to fully use our CDN. Please check the configuration by opening the page with the source code of your site and find the URL of the CDN that you are using.
