

Integration

How to integrate UCDN with XenForo?

(*Disclaimer: Please be advised that the following instructions may have undergone some changes due to the third-party software and plugins updates.)

xenforo.com

The tutorial is relevant for webversion XenForo 1.5.10

Login to your XenForo admin area.

Navigate to Appearance → Styles → [Default] → Style Properties → General.

Under field **Path to Images** replace existing content /styles/default, using your the zone name, for example:
****<http://10000-21.s.cdn13.com>/styles/default****

Click on Update Style Properties to apply your settings.

Note. If you are going to use installed XenForo to the root directory follow these steps:

- First you need to edit the file **config.php** which is in directory **library**
- You should add the following lines to the file:

Integration

```
$config ['externalDataUrl'] = 'http://10000-21.s.cdn13.com/data';  
$config ['javascriptUrl'] = 'http://10000-21.s.cdn13.com/js';
```
